Introducing dedolight neo color

Dedo Weigert Film are excited to introduce the color addition to their dedolight neo precision lighting instruments with the new dedolight neo color.

dedolight neo color is the result of technological cooperation between Dedo Weigert Film and Prolchyt. It features the superior six colour management engineered by Dr. Anqing Liu in his Hyperlight Engine. The red, green, blue, amber, cyan, and lime engine gives you the widest possible color gamut available today. This means we can

guarantee accurate skin tone reproduction for variable CCTs and also the magic of varying the gamut of a white point. In addition you can make full use of the color wheels and prestored effects.

The system can be controlled with a simple, intuitive menu via OLED display, DMX, Lumenradio CRMX or Bluetooth and the Magic Chromalink app.
